AI Quant Trading Firm — System Architecture

An autonomous AI-powered trading firm that replaces every role in a hedge fund with AI agents. You set the mission. The agents collaborate through a shared brain (Matrix) to find the best path. Don manages the operation and reports to you.

Key principles:

1. You set the mission. Don manages the operation. Matrix executes autonomously.
2. All data connected through one Ontology. No silos. Every agent sees the full picture.
3. If something breaks, the system adapts — switches exchange, raises thresholds, degrades gracefully.
4. ML models learn from every trade and continuously optimise the strategy.
